

The future generation

Only in two to five years, all the people that nowadays are less than eighteen years old, will likely be lazy. And now you think, why all this? Easy: the problem is AI. Let's analyze the issue.

On the one hand, the Artificial Intelligence has a lot of benefits that help humanity. One of them is by reducing the intervention of humans in certain processes, as it eliminates the possibilities that they can make errors. Besides, the artificial Intelligence gives rise to much more efficient production processes and with a lower error rate.

On the other hand, all that glitters is not gold. It means that the artificial intelligence, apart from the benefits, has drawbacks. For example, with growing fears that automation and AI will change the way we work and lead to growing unemployment. Moreover, it doesn't give all the information, that GPT-3 has all the information before 2021.

All things considered, the Artificial Intelligence it is necessary to help the humans. However, without and excess because this could lead to problems to reduce people's thinking, creating.... And you, what do you think about the AI
